

Scope of works for Betty project

Scope of work:

Coder will :

Step1

Source data: **data.xlsx**

The data in this file will be transferred to excel file: **Calc_template.xlsx**

The transfer process will be conducted by program

Step2

File **Calc_template.xlsx** will use the data collected and begin calculation, then the calculation will be used to replace the red tag area in file: **Calc_book_template.docx** File: **Calc_book_template.docx** has more redtag than **Calc_template.xlsx** can provide. Some data will be pull from **data.xlsx**. how the data is transfer from which cell to which part of docx file, these information could be find in detail in **milestone.xlsx file**.

Step 3

Final product:

Calc_book_template.docx

Step 4

the file will be saved to folder specified in data.xlsx

if not create the files and folders and conduct the calculation and transfer the result to the word file: **calc_book_template.docx** and also append this calculation

excel spreadsheet file as appendix to the word files **calc_book_template.docx** and save as word file

Side program: the screen show the progress bar indicate the progress.

Note: a sample files is provide at the end to show what is expected to be look like after the program finish it is work.
